

Data Engineer - Content Visibility

Zalando Finland Oy

APPLY

As a **Data Engineer** in the area of Content Visibility, you will work in a high-impact role at the core of the company's auction and content selection systems together with software engineers, economists and product managers. You will own architecture, design, implementation, and operations of large-scale, streaming ETL pipelines for data-driven decision making.

WHERE YOUR EXPERTISE IS NEEDED

- Design, develop, roll out and maintain robust data pipelines which back our auction and personalization systems.
- Work with data scientists and economists to develop and productionize estimation and prediction models.
- Create tooling to automate data workflows.
- Implement high-performance and scalable data processing systems.

WHAT WE'RE LOOKING FOR

- Bachelor or Master degree in Data Science, Mathematics, Statistics, Physics, Computer Science or a related field.
- A few years of hands on experience in designing, implementing and deploying software in a production environment using SQL and Python. Knowledge of Scala or functional programming is also useful.
- Demonstrated understanding of distributed systems, software architecture & agile development.
- Production experience with Big Data frameworks such as Spark, Flink, Airflow, Kafka or Elasticsearch, as well as developing solutions on AWS or other cloud providers.
